

# Habitat Detectives

Did you know we have a lot in common with other animals? For example, to stay healthy we need our habitat (home) to provide food, water, and shelter just like other animals need their habitat to provide them with food, water, and shelter. Take a look at the habitat in this picture and discuss with your class:

1. What animals might live in this habitat? Think of animals big and small, as well as those in the river and on land.
2. Choose a few of these animals and talk about how this habitat might provide each animal with food, water, and shelter.
